

Thoughts

- Relax about small discrepancies (where appropriate)

- Needs buy-in from testers and stakeholders

- Remember, rather than “Decimal will solve it”, think “It’s a bit more complicated than that”.

- Return to native numbers, when Decimal isn't helping anyway

- ... get some execution speed!

- For maths geeks:
  - Lean about *stable/unstable* algorithms - do errors balance each other out, or amplify each other?
